It was James Fazy, the father of modern Geneva, who freed the city of the fortified
walls that contained it until the mid-19th century. New districts were formed along
the Ceinture fazyiste (Fazyist Belt), of which the Tranchées district was the most
residential and most distinguished. In this part of town, the Cultural Trail from museum
to museum includes quite a few remarkable late 19th and early 20th century buildings.
This affluent district not only attracted many famous residents but also became
a cultural nucleus featuring several important museums within a small radius:
the Museum of Art and History, the Gallery of Graphic Art, the Baur Foundation,
the Natural History Museum, as well as the Petit Palais and the Museum of
Watchmaking, both now closed.

Walking the trail should take 45 minutes, not including museum visits.
We suggest an itinerary, but you can join the trail at any stage.

Walking Time on Trail (does not include museum visits)
As the 19th century drew to an end, increasing attention was paid to collections and their conservation and the issue of a "Central Museum", as it was called by its instigators, the Auxiliary Society of the Geneva Museum was even more pronounced than for the first competition. Uniting in one place the municipal collections for scientific and educational purposes, increasing visitor numbers, as well as providing models for artists and craftsmen in order to renew local traditions were the objectives widely expressed in many written texts. Rooms from the Château of Zizers, still visible today in the Museum of Art and History, were purchased by the Society in this spirit, in order to "provide our artists and builders, in a truly Swiss spirit, with valuable insights."

The question of the target public was nevertheless the subject of much debate: should the museum be placed geographically closer to working people in order to facilitate access or make the institution the brand image of the city by associating it with the finest districts? Finally, during the Municipal Council meeting of 4 May 1900, after exchanges covering the political, economic and urban planning issues, the Casemates, on the fringes of modern Geneva’s exclusive quarter, was chosen. Some months later, the Administrative Council launched a competition for the construction of the Museum of Art and History, its official title as from 1901, though more commonly known as the "Grand musée".

The architect Marc Camoletti, whose name can be seen at the bottom right of the main facade, won the competition out of the 43 projects submitted. Born into a family of renowned Genevan architects, he had already designed, with his brother John, the main post office on the Rue du Mont-Blanc. His project attracted attention as it was, on the one hand, the only one to propose two floors above the level of the Promenade de l’Observatoire, thus gaining a considerable amount of space, and as it conformed, on the other, to the competition’s requirements. The Museum of Art and History is thus formed of a vast four-sided building constructed around a square courtyard. The main facade has a regular arrangement of huge Ionic columns and large, arched windows that illuminate the exhibition rooms of the piano nobile. In the central axis, a group of figures sculpted by Paul Amlehn crowns the edifice. Representing Fame at the centre leaning on the eagle of Geneva, with Architecture and Sculpture on the right and History and Painting on the left, these sculptures summarise in allegorical form the museum’s contents.

Over some 7000m², the Museum of Art and History invites visitors to embark on a journey through time. Containing around 650,000 objects, including major works and unique series, its five levels present part of its collection devoted to the applied arts, fine arts and archaeology, making it one of the three largest museums in Switzerland. Painting, sculpture, historic objects, etc. all testify to the development of art and everyday life over thousands of years.

In 2020, the Cabinet d’Arts Graphiques graphic arts collection, previously housed at 5 Promenade du Pin, was relocated to the MAH building in Rue Charles-Galland. This has enabled the museum to showcase graphic arts and bring together a wide range of works from different fields.

Before its construction, between 1903 and 1909, the Museum of Art and History (Musée d’art et d’histoire) was the source of considerable debate, notably regarding the question of its location. The original idea of creating a museum dates back to 1886, when the diverse collections that had come to enrich Geneva during the 19th century, like those of the Academic Museum and the School of Applied Arts, were spread throughout the city. An initial competition launched that year was unsuccessful, partly due to indecision concerning the site of the museum. Alternative proposals were put forward but the project was abandoned due to the state of the municipal funds.

However, the National Exhibition of 1896 revived ambitions concerning culture and identity, which became focused on the creation of a museum dedicated to art and history. The National Museum in Zurich, as well as the National Exhibition, which brought together fine arts and vestiges of the past, served as precedents for this form of presentation highlighting the rich heritage acquired throughout Switzerland.
Museum to museum Tranchées

Reclining figure: Arch leg, Henry Moore, 1969-1970

Promenade de l’Observatoire
Before setting out for to discover a whole period of Geneva’s history, one should walk up to the top of Promenade de l’Observatoire and admire Henry Moore’s curvaceous statue. Henry Moore (1898-1986) liked to explore the theme of the reclining figure. The catalogue of his sculpted work contains around six hundred items, of which one hundred are Reclining Figures and only five are of such large dimensions. The strength of the Museum of Art and History’s acquisition lies in the opposition between the two masses that construct the volume in space. As for the void that contributes to the definition of the form, it is typical of Moore’s research throughout his work.

Rue Charles-Galland (1816-1901)
A remarkable broker and asset manager, Charles Galland (1816-1901) was also a patron of the arts and passionate about music. A careful but generous philanthropist “he was taken for someone who gave sparingly when in fact he gave a great deal. There was in him a little of what is known as the gruff benefactor.” (Journal de Genève, 03.13.1901).

The donation of his entire fortune to the City of Geneva - 8.5 million – enabled the latter to finance the construction of the Museum of Art and History. The City paid tribute to him by naming the former Rue de l’Observatoire after him. Charles Galland himself lived just a stone’s throw away at 8 Rue Toepffer.

A pause in the shade of the trees – please note their alignment à la française – on the Promenade Saint-Antoine provides an opportunity to consider the history of Geneva’s urbanisation. The Museum of Art and History, as well as the group of buildings to its right, were constructed on land formerly occupied by fortifications dating mainly from the first half of the 18th century.

In 1849, the government of Geneva ordered the demolition of the fortifications, thus putting an end to the centuries-old defensive urban strategy. Based on an extension plan drawn up by the engineer Léopold Blotnitzki, the city consequently doubled in size in the course of half a century. The urbanisation of the plateau thus gave rise to the most luxurious of the new districts of the day, called “Tranchées” (trenches), due to the former military installations that encircled the hill, from the Bastions gardens to the gate at Rive. Among the buyers of the land decommissioned and auctioned off by the government, the “Compagnie Anonyme des Immeubles des Tranchées” (Anonymous Company of Tranchées Buildings), set up in 1860, purchased many of the lots. The families Pictet-De la Rive and Plantamour, shareholders in the company, shared between themselves the plots of land bordering on the Bastion du Pin. Their buildings, today forming 1-5 Promenade du Pin, were completed some years later.

Franz Liszt in Geneva
At the far end of the Promenade Saint-Antoine, the Place Liszt reminds us of the presence of Franz Liszt (1811-1886) in Geneva. The Hungarian composer and virtuoso pianist lived for just one year (1835-1836) in the corner building that dominates the square that bears his name; sufficient time to leave a lasting impression on Geneva’s citizens. The Countess Marie d’Agoulé had abandoned her husband and children in Paris to follow the handsome composer, who found time to be unfaithful to her, meeting his mistresses in the secluded pavilion of the Pont de Sierre. Georges Sand joined the couple and made a point of being seen with Major Pictet, the son of the illustrious Charles Pictet de Rochemont, whom she later ridiculed in the Tenth Letter of a Traveller. In Geneva, Marie d’Agoulé gave birth to a daughter, Blandine, recognised by Liszt; the two lovers benefitting from James Fazy’s good offices and false declarations to legalise their complicated civil status... Franz Liszt gave lessons at the Conservatory of Music in Place Neuve, as well as to private students, notably Aurélie Calame, the wife of Alexandre Calame, whose works are exhibited at the Museum of Art and History and whose name is engraved on the building’s façade.

Further down, along the Boulevard Jaques-Dalcroze, adjacent to number 1 Promenade du Pin, is the Casemates primary school, constructed in 1902 by Léon and Frantz Fulpius, winners of the architecture competition launched in 1899, together with the one for the School of Fine Arts planned to be built along the Boulevard Helvétique. The latter school was designed by the architects Frédéric de Morsier and Charles Weibel in the Viennese Secession style between 1903 and 1904.
The Promenade du Pin
The former Bastion du Pin, with a pine tree at its farthest extremity, extended in a point towards Champel to which it was connected via a wire cable suspension bridge that cost 2 centimes to cross. Converted into a promenade in 1865-66, modelled on an English-style garden, it became a small park full of mystery and hiding places where winding paths meandered through areas of deep shade. The creation of gardens and promenades in all the new districts fulfilled a double objective: to offer rich foreign visitors a more attractive environment and to provide healthy recreational spaces for the growing population – 38,000 in 1850, 60,000 in 1870. The new posts of Head of the Promenades and of Gardener-in-Chief of the City attest to the importance accorded to these tasks.

Numbers 1 and 3: Pictet-De la Rive buildings
The architect Jacques-Louis Brocher, who trained at the School of Fine Arts in Paris, designed two buildings whose facades express the historicist taste of the second half of the 19th century. The symmetrical arrangement of the facade surmounted by pediments each with a bull’s eye window and sculpted with arabesques, echoes the early 18th century buildings in the Rue des Granges and those of the Promenade Saint-Antoine. The main entrance, surmounted by a Second Empire-style large arched window, establishes symmetry between numbers 1 and 3 of the Promenade.

Number 5: Plantamour building
The architect Charles-Gabriel Diodati for his part designed a more “modern” building distinguished notably by its remarkably worked and corbelled oriel window. The facade decorated with monumental pilasters and lyre-shaped windows is in an elegant neoclassical style. The sculpted ornamentation was entrusted to Charles-Menn and represents, above the ground floor windows, allegories of the seasons.

The building was left to the City of Geneva in 1927 by Mme Diodati-Plantamour, on the condition that it should be attached to the Museum of Art and History. The Library of Art and Archaeology of the Museum of Art and History, the most important in Switzerland in these fields, was installed here in 1947 following major preparatory transformation work. On the top floor, the Cabinet des estampes (Print Room), now the Cabinet d’arts graphiques (Gallery of Graphic Arts) of the Museum of Art and History, also moved into these premises in 1952.

GamMAH
The Gallery of Graphic Arts was created in 1886 through the willingness of the municipal authorities to bring together in one place all the engravings belonging to the City of Geneva. Integrated to the Museum of Art and History when the latter was established in 1910, it has been housed in 1952 in the former Diodati-Plantamour mansion at 5 Promenade du Pin.

The graphic arts collection consists of some 375,000 drawings, pastels, prints and multiples. Recognised as one of the most important European collections of works on paper, it notably holds one of the three largest collections of drawings, prints, posters and sketchbooks by Ferdinand Hodler, the largest collection in the world of works by Jean-Étienne Liotard and a reference collection of prints by Félix Vallotton, John M. Armleder and Hans Hartung.

In 2020, the graphic arts collection was moved to the main site of the MAH Museum of Art and History at Rue Charles-Galland. The 5 Promenade du Pin address is now home to the «GamMAH» – a cultural space where visitors can explore works from the museum in a new and original way. This new location encapsulates MAH’s strategy of experimenting with unique formats and offering visitors an opportunity to try new cultural experiences.

GamMAH
Open Monday to Friday from 10 a.m. to 6 p.m. (times may vary, depending on events).
Entrance Fees: pay-as-you-wish or entrance fee, depending on the event.
Before reaching the Baur Foundation, it’s worth strolling through modern Geneva’s first residential district, whose network of orthogonal streets has permitted the construction of private mansions and apartment blocks. According to the principles of hygiene of the day, these constructions are all small in scale to guarantee sunlight and air circulation. This pleasant district is well planted with trees and many of the buildings have their own small gardens. The verdant Cours Le-Fort was conceived as the heart of this small garden city.

A residential urban district appreciated by the bourgeoisie, the Tranchées attracted famous people and rich industrials that made significant contributions to the area or helped to enrich its history. Installed in the Rue Saint-Victor in a fine Second Empire private mansion designed by the architect Auguste Pompée, the Petit Palais was completely altered and extended when converted into a museum, going from two floors to six levels (three below ground level, where vestiges of the former ramparts of the Old Town were found). Created by Oscar Ghez, an industrialist who had made his fortune in rubber, the museum – now closed – was inaugurated in 1968. It houses a remarkable collection of works by French painters, covering the period from Impressionism to the School of Paris.

Although the mansions at numbers 8 to 12 of the Rue Bellot are remarkable for their architectural homogeneity, it is the presence of an illustrious occupant at number 11 that we’d like to recall at this point. Ernest Ansermet, musicologist and conductor, moved here in 1942 after his second marriage to Juliette Salvisberg. Claude Frochaux writes in La Mémoire de mes souvenirs that “There was a magnificent library, an even more fabulous record collection, African masks everywhere and, on the walls, extraordinary contemporary paintings: Picassos, Braques, Miròs and I don’t know what else”, all originals, generally given to him by his friends. Initially a mathematics professor, Ernest Ansermet studied music on the side. From 1911, he directed various orchestras in the Lake Geneva region, and then Diaghilev appointed him as conductor of the Ballets Russes from 1915 to 1923, an honour that brought him international renown. In 1918, he founded the Orchestre de la Suisse Romande (Orchestra of Western Switzerland) which he led until 1967. A musical philosopher and committed artist, Ernest Ansermet created some of the most remarkable works of the 20th century and profoundly shaped the cultural landscape of Western Switzerland.

Rue Munier-Romilly (1788-1875)

A portrait painter famous throughout Europe, Amélie Munier-Romilly (1788-1875) saw streams of famous visitors to Geneva passing through her studio. A watchmaker’s daughter, at 16 years old she was apprenticed to the painter Firmin-Massot, who would remain her teacher and friend. At 19, she was already living off the sales of her first portraits and then left to complete her training in Paris – chaperoned by her mother about whom she complained for not allowing her to paint nudes! Exhibiting regularly at the Salon du Louvre, she travelled increasingly to Paris, then to London where she painted many portraits of the English nobility. By the time of her death, she had produced more than 5000 portraits, oil paintings, pastels, engravings and lithographs. She was one of the very few women to have given her name to a street in Geneva before the 20th century.
Marie Micheli-Ador, wife of the botanist Marc Micheli, acquired some land on the Tranchées plateau at the end of the 19th century, after four of her five children had moved out of their family home at the Château du Crest in Jussy. In 1897, she commissioned the associated architects Charles Gampert and Jean-Louis Cayla to construct an ensemble of three adjoining buildings, at the corner of Rue Munier-Romilly and Rue du Mont-de-Sion. These mansions had to measure up to the most representative buildings in the district, such as the Petit Palais and the Palais de l’Athénée. Although the architecture of the Hôtel Micheli-Ador is characteristic of its day, Gampert and Cayla nevertheless broke with the regular square design through the use of projections and recesses, thus animating the volumes and giving the front building greater plasticity and character. The diverse types of openings (windows with lintels, arched windows, bull’s eye windows...) and the sculpted decorations of garlands above them enliven the mansion’s prevailing French classicism.

Although Marc Micheli died soon after moving into the townhouse in the Rue Munier-Romilly, Marie Micheli-Ador lived there until she passed away, having led a lavish lifestyle. On her death in 1938, the property remained in shared ownership until the Swiss collector Alfred Baur acquired the building in order to make available to the public his collections of Asian art objects.

Just after the end of the Second World War, when the idea of a foundation was taking shape in the collector’s mind, the latter set out to find premises that would allow the public to appreciate his artworks. He first set his sights on the buildings in the Promenade du Pin. As negotiations with the City Executive were unproductive, Alfred Baur widened his search within the same district and fell under the spell of Marie Micheli-Ador’s edifice, rented at the time to the Red Cross. The intimate setting of a private mansion was perfect for the display of his collections. In such surroundings, visitors would feel at home and could admire at their leisure the remarkable ensemble of Chinese ceramics, jades and snuff bottles from the 8th to the 19th century, as well as Japanese art objects (lacquer, prints, netsuke and sword fittings) assembled by this passionate collector throughout his lifetime. Alfred Baur acquired the building shortly before his death in 1951 and it was in 1963, after the demise of his widow, that the Alfred and Eugénie Baur-Duret Foundation began transforming it into a museum exhibition space.

This entailed a substantial amount of work. In order to gain more space, the grand staircases leading from the first to the second floor made way for a Japanese style wooden staircase with bannister. As for the original decoration, judged too heavy, it was replaced by added, customized decoration in accordance with the objects displayed in the rooms and showcases: the ground and first floors fitted out with refined luxury housed ceramics from the Tang (618-907) and Qing (1644-1911) dynasties as well as the jades, while the spaces on the second floor, steeped in a sober atmosphere, were devoted to Japanese art.

A few years after the museum opened, the need for an extension became apparent. The architect JA Perret achieved an amazing tour de force; although the mansion’s facade appeared untouchable, he designed a corner tower to replace the former veranda, that looked deceptively similar to Gampert and Cayla’s architecture. Later work carried out in 1995 enabled the creation of temporary exhibition spaces and a seminar room in the below ground levels. Lastly, since 2010, the Japanese collections have benefited from a new presentation on the second floor, reinterpreted according to a minimalist aesthetic that respects the building’s original architecture.
The land beyond the current Boulevard des Tranchées was, until the mid-19th century, a vast fertile meadow – which moreover gave its name to the district: the Contamines, alluding to an area of land owned jointly by two lords or exploited by peasant farmers – that belonged to Geneva Hospital. The institution did not wish to part with it and it was only after lengthy negotiations that the surgeon François-Louis Senn managed to purchase one of the plots of land for the construction there, in 1853, of an innovative series of houses at this time of major urban changes. In the form of an L around a square, these semi-detached houses sold to different buyers possess the uniformity desired by Doctor Senn. The latter had realised early on that it was vital to increase the density of the outlying parts of the city, irrespective of the country properties. The first urban milestone to be built in mid-19th century Geneva, this square would be echoed in the future urban planning of the Tranchées district – which we have just visited. François-Louis Senn himself lived in the corner house, the largest of this residential ensemble.

**Alternative Itinerary**

At this point in the Trail, visitors have two options: a detour via Contamines School, continuing along Rue Michel-Chauvet in order to view an artwork by Albert Gaeng, Counterpoint and fugue (1972-74) on the building’s facade and the red tubes (1974-75) by Serge Candolfi enclosed in a glass cage in the middle of the outer corridors. Then, making your way between the buildings, you can re-join the Chemin de Roches and take a look at the work by Gabriel Stanulis on the edge of the playground of Roches School. The second option is to go directly into Parc de Malagnou along the Rue des Contamines.

---

In the pleasant Parc de Malagnou, we pass the former property of Doctor Lombard which today houses the Department of Culture and Sport of the City of Geneva, as well as the chalet that served as an annex, before reaching the Villa Bryn Bella. Originally, this mansion, probably built by the architect Jean-Philippe Monod, was only quadrilateral in form, though richly decorated: the entrance on the main facade is surmounted by a pediment; there are double columns and niches for sculptures. In 1854-55, two rectangular wings were added to the Villa Bryn Bella, which blend with the existing building and one of which has windows for an orangery on the west side. A bow window was also added to the rear of the building and French windows there provide access to the garden. With these additions, Molyneux upset the original balance that characterized Stouvenel’s house. The proprietor was in accordance, on the one hand, with 17th century architectural trends that favoured wings set at right angles and, on the other, with a relative modernity in the asymmetric, picturesque option of the orangery. The building now accommodates the Cultural Promotion Service of the Department of Culture and Sport of the City of Geneva, as well as the Natural History Museum’s Cultural Interpretation Service.

---

**Route de Malagnou**

Named after the Malagniold family who, in the 16th and 17th centuries, owned land in the hamlet, this road leading towards Savoy was an ancient route linking fortified Geneva to its hinterland. Before finally coming under the jurisdiction of Geneva in the 19th century, the essentially rural communes bordering the city often changed hands in the course of successive wars and treaties. However, in the late 18th century, the rich bourgeoisie of Geneva began constructing fine summer residences there, some of which still survive today. When the Tranchées district was being developed, hundreds of dusty carts transporting stone from the Veyrier quarries to the city passed through it daily.
Great museums, great histories – that of the 
Natural History Museum spans two centuries!

The collections of the Natural History Museum 
comprise some 15 million specimens that are 
stored, classified and studied, while only the 
most significant objects are displayed to the 
public. For more than two hundred years, they 
have continued to increase thanks to donations, 
acquisitions or items collected in the field.

It was in 1794 that the question of creating a 
Natural History Museum arose in Geneva, but 
the project was abandoned after Geneva’s an-
nexation by France in 1798. The undertaking was 
renewed in 1810. The first Academic Museum, 
drawn from private collections was established 
in the Grand-Rue in 1818. Designed to comple-
ment the Academy, it hosted courses from 1819 
onwards and, from 1820, was open to the public 
on Thursday afternoons.

In 1872, the Natural History Museum moved to 
a new, purpose-built edifice at Bastions – the 
“Jura” wing of the present University – but the 
lack of space rapidly became apparent. For its 
part, the University was interested in the build-
ing that adjoined its own premises, leading 
the City to negotiate with the State of Geneva 
to hand over the latter in exchange for the 
Place Sturm. The architecture competition for 
a Natural History Museum in Place Sturm – by 
then being known as the “museum” (denoting a 
museum devoted to natural sciences) to distin-
guish it from the City’s other “musées” – was 
won in 1912 by Maurice Braillard. The project 
was however doomed by the First World War 
and the economic crisis. The problem of lack 
of space remained unsolved and the situation 
would continue to deteriorate for the next two 
decades.

In 1943, the museum’s director put a propo-
sition to the City Executive for the construc-
tion of a building large enough to contain the 
museum and all its annexes. The land at the 
corner of the Route de Malagnou and the Rue 
de Villereuse seemed appropriate, even though 
it implied the destruction of the houses then 
occupying the site. Whereas the preoccupa-
tions which had dominated the competition 
programme for the construction of the Museum 
of Art and History at the end of the 19th century 
had focused mainly on the museum’s symbolic 
value, concerns were completely different in 
1946: public access to exhibitions, exhibition 
equipment, visitor circulation, etc. The Swiss 
architect Raymond Tschudin won the competi-
tion in the second round. However, the housing 
crisis hit Geneva and the City had to invest in 
new housing as a priority. The construction 
project for a Natural History Museum was shel-
v ed once again and would not be revived until 
1956. As almost a decade had gone by, Raymond 
Tschudin had to make numerous changes to his 
initial project. The exhibition building’s lighting 
system was notably an issue. In order to avoid 
completely modifying the project that had 
received the Municipal Council’s approval, it 
was decided to black out the windows. Building 
work started in 1960. During the construction 
of the Natural History Museum in Malagnou, the 
one in Bastions continued to function as best 
it could until 1965. The transfer of the entire 
collections, spread over five different locations, 
took 28 weeks to complete: 500,000 kilos of 
material were transported in 335 lorry journeys 
and 280 trolley loads. The museum opened in 
December 1966, although the official ceremony 
did not take place until March 1967.

As soon as it opened, the Natural History 
Museum was a great success. Mention was 
frequently made of the modernity of the new 
museum, both in terms of the attractive exhibi-
tion design that was innovative for its day and 
the external envelope with its simple and regu-
lar volumes highlighting the materials (marble, 
concrete and glass) and with no additional 
ornamen tation – except for the artwork by Paul 
Bianchi on the portico.
Parc de Malagnou and its sculptures
Over the years, sculptures have naturally taken their place in the Natural History Museum’s park planted with one hundred year old trees. A stone marmot that appears to survey its surroundings from the top of a rock was one of the first sculptures installed in the park in 1967. It is the work of the famous naturalist Robert Hainard. The shallow pool next to the entrance is adorned by a sculpture by Swiss artist André Bucher called Dynamique ancestrale. This installation is part of the new programme to redevelop the museum, in collaboration with the Parks & Gardens Department of the City of Geneva.

The idea of decorating the facade of the museum was probably put forward when the building was first designed. The bas-relief by the sculptor Paul Bianchi, placed there in 1973, often intrigues visitors. Untitled, it symbolises the earth’s crust and the life that arose from the oceans. A spineless sea urchin occupies the upper left part of the sculpture. In 1961, the same artist created an elegant seated leopard, also one of the first sculptures to grace the park in 1966. The barn owl perched on its wings (1970) and the anteater (1969) at the rear of the building near the Route de Malagnou are the work of Yvan-Louis Larsen, taxidermist at the Natural History Museum. The granite bull (1947) created by Luc Jaggi was initially intended to decorate the entrance to the City’s new abattoirs. When they were decommissioned in 1997, it was moved to Malagnou Park. Lastly, an erratic boulder composed of stones of different kinds and colours produced by the destruction of other pre-existing rocks was discovered during construction work on the Lausanne-Geneva motorway. It was installed in front of the museum in 1979, as evidence of our glacial past. When the Rhône glacier advanced into the Geneva area between 70,000 and 10,000 BC, it brought with it large numbers of stones wrested from the Alps along its route. When the ice melted, around 12,000 BC, boulders like these – called erratics, from the Latin errare “to wander” – were left behind.

In 2017, an ecological and educational «mini-lab» was set up in the park, with insect hotels, frames filled with clay for potter wasps, nesting boxes for birds and bats, and a wildlife-friendly gabion wall. There’s also a gravel garden, and «Genevan» seeds have been sown, with the native vegetation providing a refuge for microfauna or flora for pollinators.

As we return to the Tranchées plateau, we catch a glimpse of the golden cupolas visible between the buildings. But before we visit the Russian Church, let’s take a detour via Place Sturm for some more urban art!
The Russian Church

On a plot of land donated by the government of Geneva, the Russian Church was constructed between 1863 and 1866 thanks to funds raised in Russia (Czar Alexander II sent 3000 roubles). It was designed by an architect from Saint Petersburg, David Grimm, but built by two local architects Jean-Pierre Guillebaud and Antoine Krafft. Originally, the eight golden cupolas – a ninth one was added above the porch created in 1916 – towered above a complete desert, as the actual Tranchées district did not then exist. Old photographs captured the odd yet touching sight of elegant women in their hats and long dresses hurrying to this splendid and completely isolated place of worship.

Inside, the faithful prayed in opulent sacred surroundings: the painted decor is the work of the artists Joseph Benzoni and Giacomo Donati. Louis Rubio created the icons on the doors of the iconostasis, whose paintings are by Grigori Kochelev, a colleague of Grimm at the Fine Arts Academy in Saint-Petersburg. Sophie, the daughter of Fyodor Dostoevsky (who wrote part of The Idiot in Geneva) was baptised at the Russian Church and her name features in the registry.

Rodolphe Toepffer (1799-1846)

The trail ends at the bust of Rodolphe Toepffer (1799-1846). He came from a family of artists: his father was the painter Adam Toepffer, and his son Charles sculpted his bust. Rodolphe also wanted to be an artist, painter, but was prevented from doing so by an eye disease he contracted at the age of 17. He became a teacher and a personality at the boarding school where he worked, at 14 Promenade Saint-Antoine. He employed innovative methods, taking his pupils on long trips which he then related in a lively manner in albums illustrated with drawings. Encouraged notably by Goethe, who was astounded by the humour in these stories and the novelty of the process, Rodolphe Toepffer produced more and more masterpieces, all full of sparkling wit. He is considered the inventor of the graphic novel.

Laurent de Pury, Untitled, 2004

Place Sturm

The plant world, with its apparent permanence and incessant respiration, is Swiss artist Laurent de Pury (1958-)’s main field of exploration. All of the artist’s sculptures comprise at least one element of natural origin. Here, the sculptor uses wood and its flexibility to produce seemingly infinite elegant curves. De Pury places his work directly on the ground, which becomes its true support, thus helping to desacralize the sculpture.
Practical Information

Finding the Trail
